

BROADWAY CHIMNEY *Denver, Colorado*

Telecommunications

The Broadway Chimney is a 1930s historical landmark for Denver. Fibergrate extended the 92' structure with the addition of an 8' antenna screen to imitate an antique chimney cap. The chimney was in very poor condition and required a retrofit for the installation due to the age. Fibergrate had to develop an anchor system to ensure the stability of the structure. The cap was constructed at ground level and lifted into place in a single pick. The chimney provides a home for two carriers: CriKet (Leap) on the interior of the cap and Verizon on the exterior 20' to 30' below.

Carriers

- CriKet (Leap)
- Verizon Wireless
