Fibergrate provides several slip and corrosion resistant products for your stairway safety needs. Our complete stair solution line includes panels in a one-piece molded configuration or assembled pultruded configuration for new or replacement steps; covered stair treads to replace deteriorating concrete steps; or stair tread covers designed to add slip and corrosion resistance to existing metal, concrete or wood steps. All Fibergrate stair treads are engineered to exceed OSHA and other model building code standards for safety, strength, durability and corrosion resistance. Fibergrate offers a wide range of fabrication services from cutting treads to desired lengths to turnkey options including drafting, engineering and fabrication of entire stairways. Contact Fibergrate for information on spans greater than 42".

Fibertred® Panels

Fibertred stair treads are available in the same high performance resin formulations as Fibergrate grating. Unique cutting channels spaced at 6" intervals provide efficient utilization when custom fitting treads into stairways. These channels also ensure that all standard stair tread widths are terminated with closed ends. Up to five 24" wide stair treads can be cut from each side of a single panel. A 1-1/2" wide gritted strip is molded in on both sides of the panel for superior slip resistance.

Standard Fibertred® Panel

</table>

**NOTES:**

1. It is suggested that stair tread deflections be limited to Span/150. Deflections based on this ratio are at the top of the table.
2. Deflections in the body of the table are for concentrated loads of both 250 and 500 lb A concentrated load is applied at the centerline of the tread, over a width of 4” and a depth of 6”, starting at the nosing edge to simulate the landing of a foot.
3. Stair treads with square mesh or for longer spans are available by custom order. Please contact Fibergrate for more information.

---

This all FRP stairway is located at a private residence in the Pebble Beach community in California. The stairway leads from the front yard of the home to the private beach below.

The stairway above utilizes Fibertred molded stair treads to provide tank access at a pumping station.
